

## Overview

**Current scenario** - There are more than 3 billion internet users and more than 1.5 billion users have multiple social media account. Rime helps to connect multiple open social media accounts and brings all publicly shared content on one “Unified timeline”. It creates “Unique identity” which holds users all online presence and saves time and make easier for other people to follow them and know more about them.

**Our vision** - We envision our platform to be the go-to place for people and content search, as we all know Google is not an answer to every search query, but for the lack of better platform Google is being used for content and people search as well.

**Traction** - We have currently 1.2K+ users from across the globe, as well as 284k+ content links has been processed so far.

**Team** - We are a team of driven and motivated members from top tech college (IITs, NITs) in India and USA (University of Iowa). We have overall 15+ years of work experience in world's top leading companies like IBM, Ubisoft, ABB.

**Competitor landscape** - There are few companies working on the giving online identity to the people like about.me, gravatar.com, flavours.me. All of them were acquired by big companies like AOL, Automattic.
